To whom it may concern,

This letter confirms that a re-test of the previously identified security vulnerabilities was conducted to verify the effectiveness of the remediation measures implemented.

Based on the results of the re-test, we confirm that all previously identified findings rated with Medium, High and Critical severity have been successfully remediated.

The original penetration testing covered the web applications console.apify.com and apify.com, as well as the REST API api.apify.com.

This attestation applies to the findings within the scope of the re-test and reflects their status at the time of testing.
